

PlotLens — Site Analysis

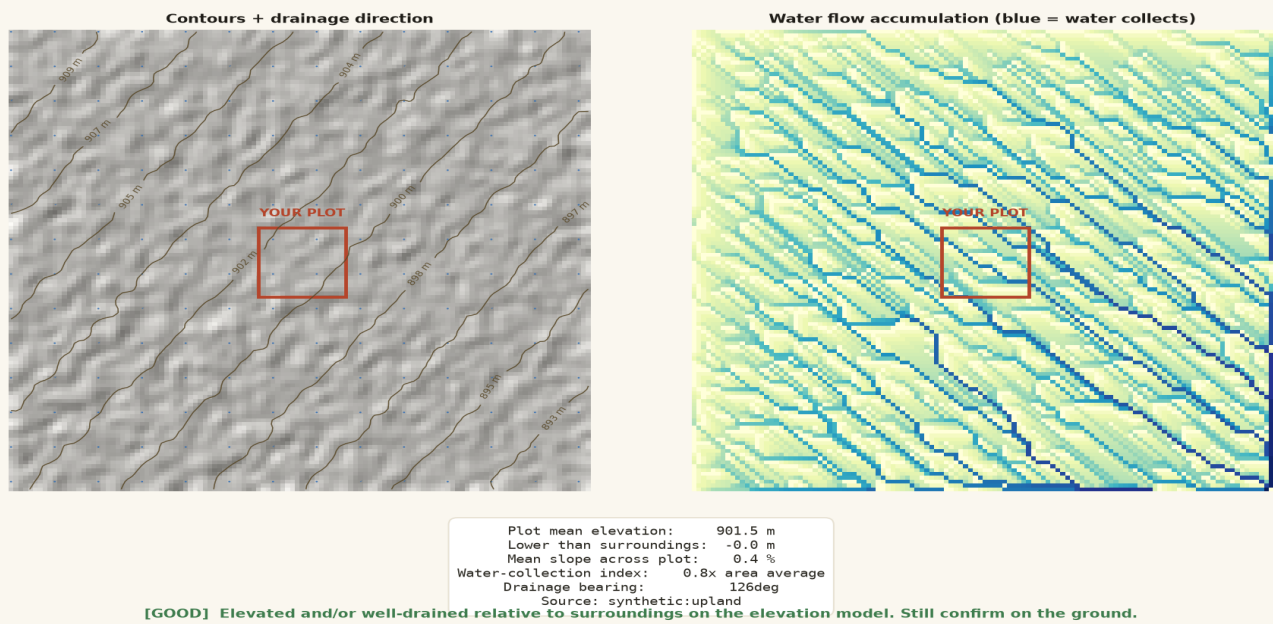

13.1986, 77.4066

Overall read: Caution

One or more factors need a closer look before you commit. See flagged categories below.

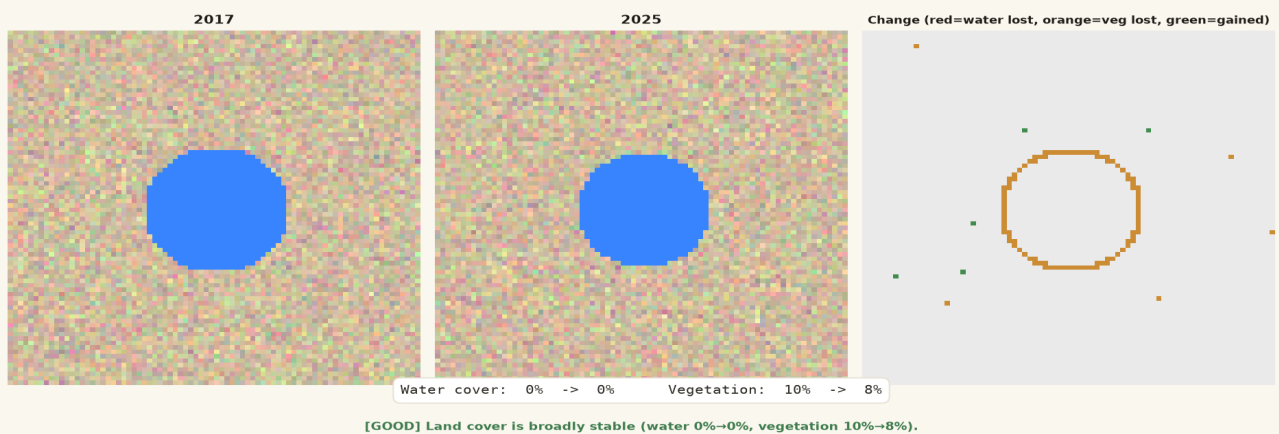

COMPUTED ANALYSIS

PlotLens — computed terrain analysis

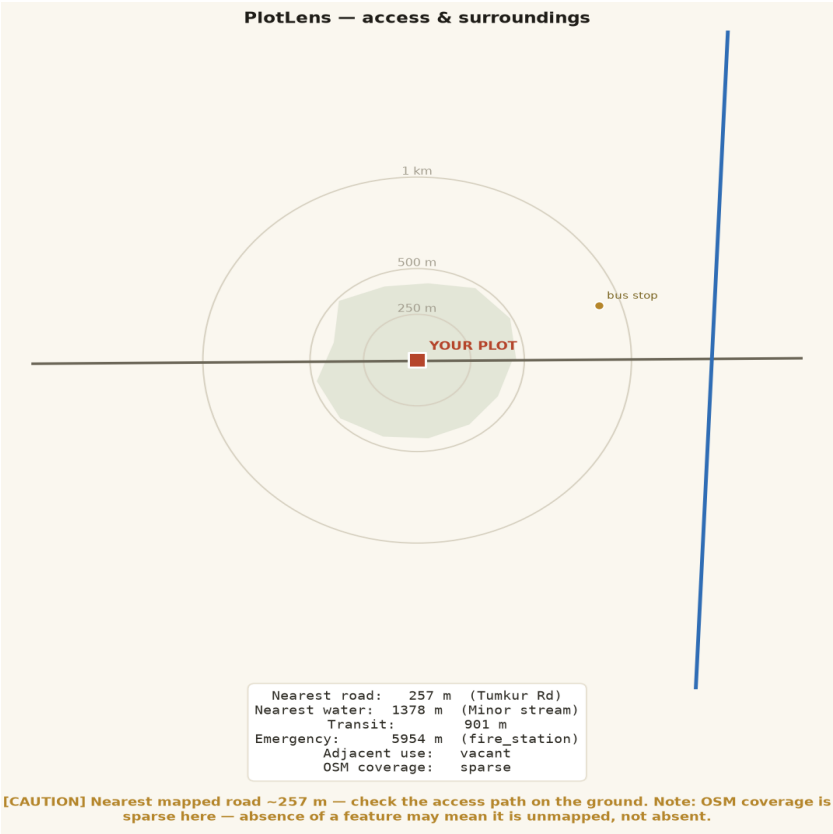

Terrain: contours, slope & water-flow accumulation

PlotLens — what changed here (Sentinel-2 then vs now)

Then vs now: land-cover change (Sentinel-2)

Access & surroundings: distances to roads, water, services

1 · Topography & Geology

GOOD

Satellite-derived

Elevation	901.5 m
Slope	0.4 %
Below surroundings	-0.0 m
Rock/soil	Inferred from regional geology — confirm with a bore test

2 · Water & Drainage

GOOD

Satellite-derived

Water-collection index	0.8x area average
Nearest water body	1378 m (Minor stream)
Drainage bearing	126 deg
Reading	Elevated and/or well-drained relative to surroundings on the elevation model. Still confirm on the ground.

3 · Climate & Natural Factors

GOOD

Satellite-derived

Sun path	E-W, standard for latitude
Note	Rainfall, wind & seismic zone added from climate/seismic datasets on deploy

4 · Circulation & Access

CAUTION

Satellite-derived

Nearest road	257 m (Tumkur Rd)
Public transport	901 m
Emergency services	5954 m (fire_station)
Reading	Nearest mapped road ~257 m — check the access path on the ground. Note: OSM coverage is sparse here — absence of a feature may mean it is unmapped, not absent.

5 · Vegetation & Landscaping

GOOD

Satellite-derived

Vegetation cover	9.6% -> 8.2%
Trend	From Sentinel-2 NDVI differencing

6 · Land-cover change

GOOD

Satellite-derived

Water cover	0.0% -> 0.0%
Reading	Land cover is broadly stable (water 0%→0%, vegetation 10%→8%).

7 · Utilities & Infrastructure

CAUTION
Indicative

Adjacent land use	vacant
Mapped utilities	From OSM; underground lines not mapped — confirm with local authority

8 · Development Rules & Legal

CHECK
Needs site / legal check

Title & ownership	Cannot be checked from satellite
Zoning / land-use class	Cannot be checked from satellite
Easements & setbacks	Cannot be checked from satellite
Encumbrance	Cannot be checked from satellite

Satellite data cannot see legal or title status. Verify these with the sub-registrar, a property lawyer, and the local planning authority. This is the costliest place buyers get caught.

SOURCES & LIMITS

Elevation: synthetic:upland · Map features: synthetic:upland · Imagery: synthetic:upland.

Indicators are derived from public satellite, elevation and map data and are indicative only. They support your judgment — they are not a guarantee against flooding, nor a substitute for a site survey, soil test, or legal title check. Elevation is ~30 m resolution; a single plot spans only a few pixels.
